

“Expert Software Services gives me access to some of the most professional people in the industry.”

Denis Boboskic
Analyst Programmer

“I came to Expert Software Services just over 12 months ago seeking to extend my technical and professional ability to its full potential. The tools and methodologies I’ve been using since were on top of my wish list. Plus I have access to the many resident experts when I want them.

At Expert Software Services there’s the enjoyment and challenge of using the latest client/server, internet/intranet and workgroup technologies. Plus the team-based project approach has meant professional, technical and personal growth. My ideas and opinions are valued. I make a difference.

Best of all, Expert Software Services recognises the importance of human values — the company tennis tournament, the go-karting night, the Christmas party, the musical theatre night, the river cruise and country retreat all demonstrate this.”

“Expert Software Services has given me the opportunity to extend my technical and professional skills.”

Charisse Ditcham
Analyst Programmer

“Since joining Expert Software Services 12 months ago, my analytical and professional skills have been greatly enhanced not only from working with the many resident experts, but also by participating in the company’s ongoing training program.

Expert Software Services has truly delivered on their promise to broaden my knowledge of using MS Visual Basic and Java together with MS SQL Server and Oracle Server to build three-tiered client/server solutions. Plus I’ve received a bonus for each milestone achieved towards qualifying as a Microsoft Certified Solution Developer.

Best of all, I’ve been able to use my knowledge where it counts — on the job. The new and varied client/server projects I’ve worked on for a large multinational client have all been highly challenging and extremely rewarding.”
