We know your strong point.

You've heard it all your life. Genius. Brain child. Einstein.

Your ideas drive your business. And we always keep that in mind.

For starters, we don't contact you unless we have something important to say. Something to help you stay on top of your business. Something that picks up where the genius in you leaves off.

We suggest you spend a little time away from your business. At our Compaq Connectivity Forum, where our strong points can sharpen yours.

That's where MicroHelp, a leading LAN installer with eight years experience, brings together Compaq's newest computers with the best software, peripherals and connectivity products. You can feel comfortable matching wits with a host of experts from Compaq, Microsoft and MicroHelp. People well versed in the leading products and standards ready to show you how to use them to make your organisation more productive.

We recognise where you can use a hand. So there'll be hands on demonstrations of connectivity hardware and software. And you'll get a close look at the most sensible ways to connect your personal computers to the other computers in your business. Be they IBM mainframes, VAX minis, DOS PCs, OS/2 PCs, or even Macintoshes.

So whether you're considering making your first personal computer connection or just looking for ways to get more out of the ones you have, our Compaq Connectivity Forum should be on your agenda.

Sure, we could be just another computer company. But we know your mind is set on a lot more.

HELP. NOT HYPE.

Compaq Connectivity Forum
