Next Generation Networks

3Com 3+Open featuring Microsoft OS/2 LAN Manager

"What is the next generation network?"
"What is Microsoft OS/2 LAN Manager?"
"What is the 3+Open system?"
"Who supports OS/2?"
"What is the advantage of OS/2?"
"How do distributed applications work?"
"How does Microsoft OS/2 LAN Manager work?"
"How can I take advantage of the next generation network?"

We hear you.

We understand the challenges you face trying to make sure your organisation keeps up to date with the rapid changes of networking technology. You need to be able to provide timely, incisive answers to your end-users.

You need to be able to provide sensible, strategic answers to your management. Answers that meet both short-term and long-term business goals. Your job depends on it. So does your business.

At the forefront of personal computer networking technology, MicroHelp is especially aware of your needs. We listened to your concerns and from this, developed a seminar that delivers you the information you need, no holds barred.

The MicroHelp Half-Day Next Generation Network Seminar.

It's designed for business managers and information centre managers who are sick of attending the usual tedious one-day seminars, whose message could really have been delivered in 30 minutes.

Don't waste thousands of dollars, and your time, trying to get this information elsewhere. Come and hear it from those who really know, at a **FREE** MicroHelp Next Generation Network Seminar.

Hear all about it.

We've heard your needs. Now it's time to hear how we've responded. We'll answer all of those introductory questions, and many more! And we're going to cram all of it into a highly concentrated, hard hitting two hour session.

A morning session for those of you just beginning your search for the right network solution, and an afternoon session for existing network users.

Hear it from people who know.

Wes Raffel, 3Com's Director of Intercontinental Marketing. Wes was a member of the 3Com/Microsoft design team for OS/2 LAN Manager. 3Com was the first company to ship an OS/2 LAN Manager based product, 3+Open. He is widely respected for his ability to communicate his networking knowledge to others.

Daniel Petre, Microsoft's Managing Director in Australia. In combination with IBM, Microsoft created OS/2. And they teamed with 3Com to bring us OS/2 LAN Manager. Today Microsoft and Ashton-Tate are working to produce OS/2 SQL Server. Daniel is an excellent communicator with an extensive knowledge of industry trends.
